All-Makes Remanufactured Power Steering Pump Line

ACDelco has announced a remanufactured power steering pump line which consists of approximately 600 part numbers that cover more than 90 percent of the foreign and domestic vehicle applications on the road in the United States and Canada that utilize power steering systems. The ACDelco remanufactured power steering pump units are designed using state-of-the-art computer and manufacturing technologies to meet or exceed original equipment specifications for all applications. QS59000 certification will be complete in the first quarter of 1998 for all facilities in which the remanufactured power steering pump line is produced. The remanufacturing process involved with each of the new pumps features quality procedures such as: cores that are totally disassembled, inspected, cleaned and continuously protected against rust during disassembly, inspection, assembly and testing; the use of many new components; 100 percent leak testing prior to shipping; and exclusive support from Delphi Saginaw, the world leader in steering systems. Remanufactured power steering pumps will be marketed to ACDelco distributors, jobbers, retailers, and GM dealerships beginning in late 1997. For more information, visit the ACDelco "On The Edge" web site at <http://www.acdelco.com> and the GM Goodwrench Service "Cyberbay" at <http://www.gmgoodwrench.com>.

de Carbon® Shocks Added To Lineup

The ACDelco suspension line, which currently includes the Optival and Reactek sub-brands, will be expanded with the addition of de Carbon® perfor-

mance monotube shock absorbers early in 1998. Monotube damper technology, invented by the de Carbon® company, in France, produces superior ride and handling compared to conventional shock absorbers. de Carbon® dampers feature a simple, yet elegant, monodisc valving system that has only one moving part compared to the complex valving of other designs. The reduced number of moving parts also eliminates valve friction, improves responsiveness and gives the damper enhanced durability. Furthering ACDelco's All-Makes strategy, de Carbon® shocks will be available for a broad range vehicle applications. These include high performance and sport utility vehicles, European and American luxury vehicles and light duty trucks.

Strong Arm® Gas Charged Lift Supports

AVM's Strong Arm® Gas Charged Lift Supports were pioneers in the lift support aftermarket and continue to lead the way with innovations like its patented Temperature Compensating Technology and Multi-Lobe shaft seal. Strong Arm® Lift Supports are possibly best known and appreciated for being a direct fit OEM replacement part that is easy to install. But what is not commonly known is the level of technology that is engineered into each lift support. The Strong Arm® lift support has improved upon the traditional lift support in many ways, with the integration of Multi-Lobe seal technology in conjunction with hard

chrome plated shafts, as well as AVM's patented TCM. The AVM Multi-Lobe shaft seal with its three points of sealing contact, provide the best defense to many of the problems that cause premature lift support failure such as lack of lubrication, contamination with dirt and dust, temperature variations, vibration, and side loading which all contribute to gas force loss. Strong Arm® Gas Charged Lift Supports, as well as all other AVM products, are proudly manufactured solely in the United States. AVM, Inc., a division of Arvin Industries, supplies AVM gas springs to the original equipment automotive and industrial markets worldwide.

Tri-Stage Diesel Fuel Treatment

Cyclo Industries' advanced Tri-Stage Diesel Fuel Treatment formula is designed to help prevent the major problems and downtime caused by cold weather diesel fuel wax and ice crystal formation. This unique formula attacks and overpowers paraffin wax, water & carbon - the 3 major problem causes in diesels. Tri-Stage contains ANTI-GEL, DE-ICER, and

STABILIZER. Plus, it contains lubricant for low sulfur fuel. Available in a one-quart size that treats 250 gallons or a one-gallon size that treats 1,000 gallons.

Cyclo Industries

Great Bearings

L&S Automotive, a leading supplier of top-quality aftermarket and OEM parts since 1939, produces a full line of antifriction bearings and oil seals for nearly every car and light truck on the road today. L&S, which built its reputation as a manufacturer of precision antifriction bearings for the emerg-

ing automotive industry, uses only the most advanced alloy materials. L&S bearings stand up to the toughest applications, including farm equipment, industrial machinery, off-highway equipment along with passenger cars and light trucks. From wheel bearing sets, to clutch release bearings, to taper rolling bearings, to front-wheel-

drive spindle bearings and agricultural bearings, L&S products consistently feature the highest quality and reliability. L&S also stocks a full line of oil seals, produced from the latest composite materials, for thousands of vehicular applications.

L&S Automotive

Circle No. 287

Brake Finishing

Aurora Industries offers Squeak Relief Brake Finishing Treatment as relief from costly brake service comebacks. When lightly sprayed on rotors and drums, Squeak Relief stops brake noise, delivers faster friction break-in and better "pedal feel." The product's microfine oxides form a molecular bond with the rotor/drum friction surfaces. This composite finish eliminates irritating vibration and brake squeal at the source. Squeak Relief costs less than 50 cents per axle when used as directed and is effective on all brake systems. Benefits last for one year of average driving or more.

Aurora Industries

Circle No. 288

Aftermarket Transmission Remanufacturing Program

ZF Industries, a remanufacturer of automatic transmissions for BMW, Land Rover and Chrysler is pleased to introduce an enhanced Aftermarket

Automatic Transmission Remanufacturing Program. Over 10 different part numbers are available through authorized distributors. All transmissions are disassembled, inspected and then remanufactured to

factory specifications using genuine factory-spec parts.

Bosch IAR Replacement Alternators

Bosch offers the ideal solution to repeated premature failures of Ford IAR alternators—100 percent

new Bosch IAR replacement alternators. These are not conversions, they are new Bosch alternators approved by Ford Mexico, and are

packed with features which make them far better than the original units they replace, according to Bosch. These features include:

- *A threaded B+ post is used, which alleviates the need for the B+ plug in the Ford wiring harness which is prone to overheating and melting.*
- *Bosch replacements are rated at 90 amps output, versus the 65-75 amp rating of the original units.*
- *Bosch units use a large horse-shoe-shaped rectifier, which improves heat dissipation for longer service life.*
- *Bosch replacement units utilize the same mounting provisions as the original. There is no need for extra brackets or adapters.*
- *Bosch units use the exact same size rotor shaft and threads as the OE unit, providing for the reuse of the original fan and pulley.*
- *Only four replacement unit SKUs are required to provide coverage for nine original reman SKUs, or 65 OE SKUs.*
- *Four SKUs provide coverage for 15,000,000 original Ford cars and light trucks from 1986-1994, of which 11,000,000 are still on the road today.*

Castrol A/C PAG Lubricant

Since 1993, new vehicles have been leaving the factory with R-134a refrigerant and PAG lubricant in the A/C system. For those

applications that call for it. **Castrol** introduces A/C PAG 46, 100 and 150. The oil is available in cases of 12x8 oz. bottles. Features of the new PAG oil include:

- *Meets or exceeds OEM specifications.*
- *Available in ISO viscosity grades 46, 100 and 150.*
- *Maximum protection against compressor wear.*
- *Excellent thermal and oxidative stability.*
- *Moisture tolerant.*
- *Compatible with R-134a and R-134a A/C system components (not for use in R-12 (Freon®) systems).*

Castrol's complete family of quality mobile A/C products helps you "keep it simple" while

converting to R-134a. These products include Retro A/C polyol ester lubricant specifically designed for mobile A/C systems; R-134a Oil Charge; an effective A/C flush; and a full range of R-134a Retro Kits that include lubricant, R-134a adapter and other components needed to perform a retrofit.

Right Stuff® Gasket Maker Cartridge

Loctite has added a professional installation gasketing system featuring a new five ounce cartridge of the Right Stuff®. Designed for precision dispensing, this cartridge fits a specially designed caulking gun that makes it easier to instantly replace any size or shape gasket, even in the tightest spots. More reliable and longer-lasting than cut gaskets, the Right Stuff protects against leaks caused by vibration and thermal expansion, even when used to seal scored or imperfect surfaces. Resistant to oil, coolant and transmission fluid, the Right Stuff is OEM specified on Ford, GM and Chrysler production lines. With the Right Stuff, there is no wait—once applied, the engine can be started and the car can be driven immediately.

Loctite Corporation
Circle No. 292

Honda/Acura Fuel Injectors

Borg-Warner has announced the availability of Honda and Acura fuel injectors. Fuel injectors, like all engine management components, have to work in perfect harmony with the systems for which they were designed. Borg-Warner brand fuel injectors are designed and manufactured to work in concert with any import or domestic vehicle system and any original equipment injector. Borg-Warner brand can now service the over 20 million Honda injectors in service today with six part numbers.

Borg-Warner Automotive Corporation
Circle No. 293

Exhaust Systems

Bosal USA, Inc. has introduced its new line of Bosal Brospeed Stainless Steel Performance Headers and

Exhaust Systems. Each exhaust system is manufactured from T-304 stainless steel; headers are made of ceramic-coated mild steel. Bosal Brospeed's free-flow systems and headers are precision engineered and dynamometer-tuned for optimum engine performance. The company claims customers can experience an engine output increase from 10 percent to 15 percent when the systems are installed with headers, and a 4 percent to 8 percent increase with cat-back exhaust only.

Bosal USA, Inc.
Circle No. 294

Pumps & EGR Valves

Hella, Inc. offers the full line of Pierburg Fuel Pumps, EGR Valves and Vacuum Pumps. Pierburg Fuel Pumps deliver quiet, dependable operation, says Hella, and are the OE choice of top auto manufacturers. Comprehensive application coverage

requires only 10 SKUs as opposed to 60 competitive part numbers. The fuel pump line as well as Pierburg EGR Valves and Vacuum Pumps are made and tested to rigorous QC standards.

Hella, Inc.
Circle No. 295

Laminating Adhesive

3M has introduced 300LSE Laminating Adhesive, designed to form an unmatched bond to difficult-to-bond surfaces such as powder coatings, lightly oiled metals and low-surface-energy plastics, including polypropylene, which is typically used in automotive interior and underhood parts. The adhesive offers exceptional chemical and temperature resistance. This feature makes it ideal for applications where graphic nameplates, appliques, decorative trim or die-cut parts are exposed to high temperatures and underhood fluids.

3M

Ride Control

Monroe Auto Equipment/Tenneco Automotive has expanded its Sensa-Trac product line by introducing 90 new part numbers designed for European and Japanese vehicles. With a total of 118 European part numbers, Sensa-Trac coverage is almost 99 percent of all European cars sold in North America. Sensa-Trac shocks and struts provide drivers with the comfort they expect under normal driving conditions, and the increased control required during more demanding driving.

Tenneco Automotive
Circle No. 297

Friction Plates

Carfel Inc. offers redesigned Honda OEMMPZA and Civic friction plates under the BRYCO brand name. The plates have segmented friction material which provides optimal fluid flow and helps eliminate chattering, shuddering and slipping complaints. The OEM plates are available for immediate shipment by-the-piece or in overhaul kits.

Carfel Inc.
Circle No. 298

Refrigerant

PYROIL Performance Products offers R-134a, the ozone-friendly refrigerant that contains no chlorofluorocarbons (CFCs). PYROIL's refrigerant is available in 12-oz. cans, as well as 15-lb. and 30-lb. cylinders. Marketed by The Valvoline Company, the PYROIL chemical line also includes high and low viscosity polyalkylene glycol (PAG) lubricants. Because of their good solubility and lubricity, PAG lubricants have been chosen by the automotive industry for use with R-134a systems.

PYROIL
Circle No. 299

Performance Exhaust

Ansa Automotive Parts Distributors' Sport line of high performance exhaust systems reduces back

pressure to increase air volume through the engine. This maximizes torque and produces up to a 15 percent hp gain. Ansa Sport mufflers have a bold sporty look and sound that automotive enthusiasts

demand. They are made of corrosion-resistant aluminized steel with black crinkle paint finish and stainless steel or chrome tips. Systems are quick and easy to install because they are direct-fit, OE replacement units. Ansa Sport systems are made for import and select domestic cars, and are war-

ranted for a full 12 months. Coverage includes Acura, Alfa Romeo, Audi, BMW, Corvette, Honda, Mazda, Mercedes, MG, Nissan, Porsche, Renault, Toyota and Volkswagen. Other European applications are also available.

New Oil Filter Design

Wix Filtration Products Division, Dana Corporation has produced a new oil filter design featuring a temperature-compensating, molded silicon expansion

valve that combines the functions of anti-drain back and pressure relief by-pass valves for greater reliability and enhanced performance in today's high-temperature engines. In the new design, two separate valves made

of nitril rubber have been replaced with a single molded silicon expansion seal. The result is enhanced performance during the life of the filter through the use of a superior material — silicon — and a simpler, more reliable design, according to WIX engineers. The new design, which does not impact filter efficiency or capacity, was phased into the WIX filter line last year.

Dana Corporation
Circle No. 301

Specialty Head Gasket

Fel-Pro has introduced the first aftermarket-only Multi-Layer Steel (MLS) head gasket to solve tough sealing conditions of the Toyota 5VZFE 3.4l V6 truck engine. Many of these engines used in 1995-98 T100 and Tacoma pickups as well as 4Runner SUVs, says Fel-Pro, are experiencing premature head gasket failure. Fel-Pro engineers identified MLS gaskets as a

solution for these hard-to-seal Toyota 3.4 liter engines because of their ability to maintain a seal even in the presence of excessive casting motion. These gaskets are made of multiple layers of full-hard stainless steel that are embossed at all of the critical sealing areas. A thin rubber coating provides fluid sealability on the top and bottom faces as well as between layers. This new MLS head gasket design is available in Fel-Pro's head set part no. HS 9227 PT. To provide total engine sealing, this head set should be used in conjunction with Fel-Pro's conversion set part no. CS 9227.

Fel-Pro
Circle No. 302

Oil Filter Line

AlliedSignal says its new FRAM TOUGH GUARD oil filter raises the standard for engine protection in vehicles operating under severe conditions including extreme heat or cold, stop-and-go traffic, unusually dirty roads and heavy loads and towing. TOUGH GUARD features advanced innovations including synthetic glass and cellulose media, a screen-over by-pass valve to provide back-up filtration, a silicone anti-drainback valve and PTFE-coated exterior gasket. FRAM TOUGH GUARD is offered in 22 models covering 94 percent of U.S. automotive applications.

AlliedSignal

Electronic Cleaner

CRC Industries, Inc. has developed QD Electronic Cleaner to clean modern electronic systems. With over 2,500 electrical/electronic connections, the average car today has a multitude of places where dirt and corrosion can cause serious problems, says CRC. QD Electronic Cleaner effectively removes dirt, flux and other contaminants from electrical surfaces. This protection is important for vital components such as anti-lock brake wheel speed sensors and air

bag connectors. In addition, QD Electronic Cleaner is suitable for home use on VCRs, tuners and receivers. The CFC-free cleaner evaporates quickly and completely, and is harmless to most plastics.

CRC Industries, Inc.
Circle No. 304

Remanufactured Blower Motors

Crown Remanufacturing Inc. has introduced a full line of Crown Precision Remanufactured Blower Motors, with coverage from Acura to Volvo and a 12-month/18,000 mile warranty. Crown Blower Motors are remanufactured to OEM specs using OE cores. Each unit is 100 percent tested to exacting standards by qualified quality control technicians. All testing is done to ensure consistency and reliability that meets or exceeds OEM specifications.

Specialty Thread Repair

Heli-Coil, a Black & Decker company, recently debuted the Sav-A-Thread Spark Plug Repair Kit For Recessed Spark Plug Holes (5411-14). The kit is designed to meet the growing need for a spark plug thread repair kit that can be used in deeply recessed spark plug ports. The new kit is based on the Sav-A-Thread line of spark

plug thread repair kits developed by Heli-Coil. The kit uses a specially designed tap and installation tool to access the internal threads. It comes with an expanding tool for positively locking the Heli-Coil insert in place and includes three insert lengths to accommodate short, normal and long spark plug port reaches. The entire kit is packaged in a molded plastic box. Individually packaged replacement inserts are also available.

Clear Base Oil

Pennzoil has announced that it will begin using crystal-clear base oil in the refining of its multiviscosity motor oils — a significant technological advancement. Although Pennzoil's distinctive yellow packaging, quality, cost and general appearance of the motor oil itself will remain the same, says the company, what is changing is the purity of the base oil used to make the motor oil. The new base stock is the result of a revolutionary refining process that destroys virtually all of the contaminants and harmful components in crude oil. The process allows the motor oil additives to better do their job, explains Pennzoil.

Pennzoil
Circle No. 309

New Lubricant

WD-40 Company has introduced a new product for the first time in 43 years: T.A.L. 5 lubricant. T.A.L. 5 (Triple Additive Lubricant) is an extra-strength spray which resists breakdown due to five factors: corrosion, friction, temperature, load and motion. T.A.L. 5 differs from WD-40 in that it is designed as a heavy duty, long-lasting lubricant, whereas WD-40 has numerous applications, including cleaning, penetrating stuck metal parts, displacing moisture, preventing rust and corrosion, as well as light lubrication. Applied to metal, rubber or plastic, T.A.L. 5 provides long-lasting

film strength and durability which can help prolong the life of equipment. It is ideal for heavy duty lubrication on assemblies, cables, chains, cogs, hydraulics, linkages, lugs, pulleys, sliding tracks, winches and more.

WD-40 Company

Ride Control Program

Mighty Auto Parts and **Gabriel** have combined forces to produce a new line of "smart" shocks and struts. The nitrogen gas-charged shocks, struts and replacement cartridges are being marketed as "The Ultimate Ride Control Program." The product line features Velocity Sensitive Technology (VST), a patented dampening valve that senses and instantly adjusts to changing road conditions for a more comfortable, better handling ride. Mighty guarantees full coverage for virtually all cars, SUVs, minivans and light trucks. The shock and strut program includes the personal attention of Mighty inventory specialists trained to customize inventories according to local vehicle registration data. Additionally, consumer education materials, such as quick-read brochures and large "symptom" posters, are available.

Mighty Auto Parts
Circle No. 311

Fuel Pump Noise Reduction Kits

Standard Motor Products, Inc. has announced the availability of NR1, a noise reduction kit for rotary vane electric fuel pumps. The kit doesn't actually quiet the pump, explains Standard, but instead elim-

inates the noise transmitted to the passenger compartments. Rotary-vane pumps (like Standard's EFP4070 and EFP364) are frequently retrofitted to work trucks, SUVs and motor homes. These positive-displacement units are very durable and deliver high

volume and constant fuel flow without pulsation, but are inherently noisy because of their basic

design. If the noise bothers the vehicle owner, installation of an NR1 kit solves the problem. The kit includes three isolator bushings, rubber hoses and all installation hardware. These components effectively "float" the pump, isolating the noise from the fuel lines and the chassis. The bushings and hoses won't deteriorate in the presence of gasoline, motor oil or other contaminants.

Standard Motor Products, Inc.
Circle No. 312

Clutch Kits

L&S Automotive offers a wide variety of new Clutch Kits and components for cars and light trucks. Clutch kits contain OEM-quality components, built

for ultimate fit and function, and are easy to install, says L&S. The

company also stocks related components including clutch forks, pilot bushings, cables and bearings. For maximum protection, L&S clutch kits are packaged in foam rubber to safeguard critical parts during shipping.

L&S Automotive
Circle No. 313

Auto Link Fuses

Littelfuse has available the PAL 500 series of high amperage OEM Auto Link Fuses. Designed to protect the high current circuit of the wiring harness, PAL 500 series Auto Link

fuses are installed as original equipment in 1997 and 1998 new car models from Nissan, Honda and Acura.

Littelfuse
Circle No. 314

Reman Heads

The Engine Connection, Inc. offers a complete line of remanufactured and fully assembled hard-to-find car and light truck cylinder heads that include a new 18 month/unlimited mileage parts and labor warranty. TEC Remanufactured Cylinder Heads include over 100 different domestic and import models. They are machined on Serdi equipment using the actual valve guide as the centering device. Gasket sets are also available.

The Engine Connection, Inc.
Circle No. 315

Lift Supports

R&B Inc. offers Mighty Lift! gas charged Lift Supports, used to hold hatchbacks, trunk lids, liftgates and hoods on vehicles. The replacement units incorporate universal attachment brackets, eliminating the need for separate part numbers for left and right side units. R&B has consoli-

dated part numbers — only 10 of its best-selling units provide the same application coverage as 15 or more competitive SKUs. Fifty percent of all Mighty Lift! part numbers represent import vehicle applications, says the company.
